

ANTÓNIO SANTOS

Junior Full Stack Developer

Portugal | (+351) 934337599 | antonio.j.santos.1995@gmail.com | LinkedIn: [linkedin.com/in/as-software](https://www.linkedin.com/in/as-software) | GitHub: github.com/A-S95 | Portfolio: portfolio-as-azure.vercel.app

PROFILE

Junior full-stack developer with a background in interior design and 3D modeling before moving into programming. Hands-on with Python/Flask, PostgreSQL, and JavaScript, and comfortable using Power BI to turn data into dashboards people actually use. Adaptable, detail-oriented, and quick to pick up new tools and technologies.

TECHNICAL SKILLS

Languages & Frameworks: Python, Flask, Java, C/C++/C#, VB.NET, ASP.NET, JavaScript, jQuery, HTML/CSS, PHP, COBOL

Databases: PostgreSQL, SQLAlchemy, MySQL, SQL

Tools & Other: Git, RESTful APIs, Celery, RabbitMQ, Power BI, Windows/Linux, Network Management, 3D Modeling

AI & Automation: AI Coding Assistants (Claude Code), LLM APIs (OpenRouter), AI Pair Programming

Interpersonal Skills: Adaptability, collaboration and teamwork, creativity, curiosity, time management

LANGUAGES

Portuguese (Native) | English (B2) | Spanish (B1)

PROFESSIONAL EXPERIENCE

Full Stack Developer — Internship

Teamlyzer | Lisbon, Portugal (Remote) | April 2026 – August (5 months)

- Built a review sentiment scoring feature on Teamlyzer's existing OpenRouter LLM integration: engineered a deterministic 0 to 100 score, the supporting database table, and the front-end styling and visibility.
- Designed and shipped a chat-sharing feature for Teamlyzer's AI chatbot that locks shared conversations read only, and ran functional QA on the chatbot (response time, accuracy, hallucination risk) across real conversations.
- Diagnosed and fixed 2 production bugs (Flask/Jinja/SQLAlchemy) silently hiding valid salary reviews and blanking rating bars, validating each fix against live data before shipping.
- Replaced a risky, manually run admin SQL script with a rollback-safe Python/SQLAlchemy tool, using it to migrate 17 records across real accounts with zero data loss.
- Built a B2B "Presentation Mode" feature to hide sensitive dashboards during client demos.
- Set up Teamlyzer's React Native mobile app locally with Expo Go to test it on a real device, catching a data moderation bug where reviews weren't saving correctly.
- Collaborated with a teammate to seed and QA the forum feature: ran SQL scripts to populate realistic test data and verified referential integrity across channels and posts.
- Used Claude Code and AI coding agents for daily codebase audits, treating every AI suggestion as something to verify, catching a stored-XSS risk by cross-checking changes against live code and production data.
- Gained hands-on experience with asynchronous task processing (Celery/RabbitMQ) and version control practices in a production codebase.

Smart Infrastructure Department — Internship

Siemens SA | 2025 (4 months)

- Designed and built multi-page, interactive Power BI dashboards that improved usability and accessibility of reporting for the support team.
- Built and maintained data models integrating corporate and external data sources, creating calculated measures and KPIs for business reporting.
- Improved data reliability by implementing cleaning, validation, and transformation processes across complex datasets.
- Partnered directly with end-users to gather requirements and translate feedback into dashboard improvements, increasing adoption and usability.
- Contributed to the rollout of an international project, aligning reporting standards and data requirements across internal and external teams.

Technical Department — Internship

FNAC Saldanha | 2024 (3 months)

- Diagnosed and resolved hardware and software issues efficiently, restoring functionality for computers, tablets, and peripherals.
- Performed OS/application installations, updates, and performance optimizations while safeguarding customer data through reliable backup procedures.
- Delivered in-store and technical support to customers, translating technical issues into clear, actionable guidance.

Interior Designer and Technician

ACS Cozinhas | 2019 – 2023 (4 years) | Full Time

- Created detailed 3D drawings and plans using Teowin software.
- Managed interior design projects, ensuring alignment with technical specifications and client requirements.
- Handled assembly and preparation using CAD-type software, coordinating directly with clients.

EDUCATION

IEFP – Lisbon | Diploma in Computer Programming, 2023–2026

Computer Programming — Software Development, Programming Logic, Systems Analysis

Escola Profissional de Tomar | Technician in Electronics and Telecommunications, 2018

Focus: Embedded Systems and Programming with Arduino

PROJECTS

Portfolio (2025) — HTML, CSS, JavaScript, PHP

Personal portfolio site with dark/light theme, map, and contact form, with a clean visual and responsive navigation.

Demo: portfolio-as-azure.vercel.app

Cinema (2025, in development) — React, TMDB API

Application to browse movie information (synopsis, rating, trailer), with a favorites page, quick navigation, and centralized state management via MovieContext.

Demo: [Cinema - AS](#)
